

VOLANTÉ SYSTEMS THE NEXT HORIZON IN HOSPITALITY

How can you be tomorrow's leader with yesterday's technology?

Discover the most powerful, reliable and easy to use Point-of-Sale System ever.

THE NEXT HORIZON IN HOSPITALITY

Volanté™ represents the next generation in enterprise POS management systems for the hospitality industry. Developed from the ground up, with state of the art technology, Volanté will meet the most complex demands of diverse users today and well into the future. Simple to use, yet extremely powerful, Volanté's versatile architecture puts power at the fingertip. Whether it be changing a menu item or reformatting the layout of corporate reports, Volanté's engine gives users the flexibility to customize details to any specification. With incomparable operational capability, a comprehensive feature set, powerful reporting abilities and superior fail-safe data redundancy and data synchronization management, Volanté offers an integrated, enterprise system solution designed to raise the level of business practice.

STATE OF THE ART TECHNOLOGY

Volanté has been developed entirely in Java™; Java is a next generation development platform. Its highly object and network oriented nature makes it an excellent choice for a complex hospitality environment. Java is also the premier language of the Internet. Volanté thus is able to seamlessly integrate corporate activity to the powerful features of Internet computing. Also, given that Java is a cross platform compatible language, Volanté will run on the operating system of your choice (Windows™ 2000/XP, Linux, Unix) and in mixed operating topologies (i.e., Linux/Windows).

FAIL-SAFE DATA PROTECTION AND DATA SYNCHRONIZATION

Volanté is a hospitality POS industry leader with its innovative data redundancy management system. Volanté was designed with a peer-to-peer architecture providing a high degree of security and fault tolerance. This design allows all terminals to be connected yet work independently ensuring continuous store operation even in the event of a network or host computer failure or both. With Volanté's advanced data synchronization capability, transactional consistency is maintained on all terminals at all times! The result is maximum system availability.

MENU PROGRAMMING

Volanté's comprehensive menu design tool will allow the user to create menus quickly and effortlessly. Does your restaurant have a large menu selection? Unlike typical POS systems that force you to fit your menus into their limited layout, Volanté's open hierarchical menu structure gives the user the ability to add as many entries to menus as is necessary. No matter how simple or complex the menus are, Volanté ensures that there are no limits.

GRAPHICAL TABLE MANAGEMENT

Volanté features a powerful and flexible table management system. Because every restaurant is different, Volanté allows the user to design section layouts according to site needs. In the dynamic restaurant environment, being able to change your floor plan on the fly is a necessity. Need to add a new table? How about splitting or merging tables for those busy nights? No problem. With Volanté, all this can be done on the fly, at any terminal, in seconds.

FAST, ACCURATE & EASY TO USE

Developed using state of the art graphics technology, Volanté offers an attractive and extremely easy to use interface. Gone are the block like graphics of traditional hospitality POS systems, which also come with steep learning curves. With Volanté, everything is displayed in an intuitive and appealing manner allowing the user to get all the information needed with just a glance at the screen.

VIRTUAL ENTERPRISE OFFICE

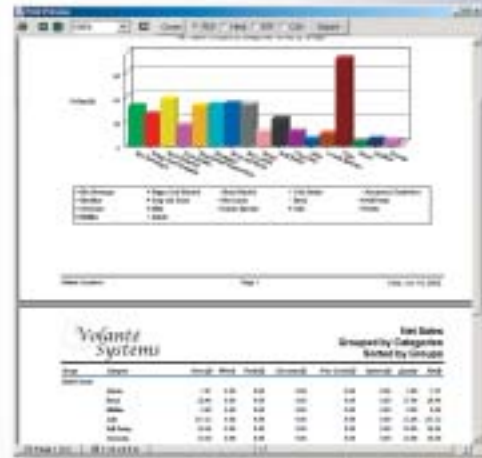

For the corporate user, Volanté's Online Enterprise Office features a fully integrated enterprise management system. Volanté's architectural backbone was designed and built upon the VKAS engine. VKAS is a powerful and proven Java based transaction engine that specializes in handling and synchronizing high volume operational data in an enterprise environment. VKAS also features a dynamic custom reporting tool, which focuses on distributing and displaying the collected data securely through a private network or through the Internet, using a web browser, at the highest level of detail. This is important to users that need to be able to customize features according to specific requirements.

HAND-HELD REAL TIME R/F WIRELESS

Volanté's design incorporates wireless hand-held technology. Thus Volanté's hand-held solution is fully integrated with the main register system. This results in the ability to mix operating topologies, in an integrated fashion, seamlessly under the auspices of a single file handling system. Volanté's hand-held system supports both Windows and Java OS operating environments.

CLEAR & CONCISE REPORTING

Volanté offers a full reporting suite to aid in management decision-making. The suite is designed to provide a clear insight into all aspects of the hospitality business. All the information needed is generated in real time, with meaningful graphs, quickly and easily. Tailored summary reports give the user the ability to view only the information desired to be seen. Less time is thus spent trying to find information and more time is spent managing the business.

DATABASE CONNECTIVITY

Using the latest in database technology, Volanté was designed with scalability in mind. Volanté's database management system is fully ODBC and SQL compliant ensuring that third party systems can easily integrate with Volanté. Furthermore, Volanté's flexible design gives the user the option of choosing the enterprise database server of choice. Consequently, with Volanté's advanced architectural design, coupled with its platform independence and open database flexibility, the user's technological investment is protected now and well into the future.

VOLANTÉ FEATURES

VOLANTÉ BASIC SUITE (WINDOWS 2000/XP OR LINUX)

- Job Type Security Level
- Hardware Configuration
- Tax Configuration
- Menu Definition, Food, Bar and Merchandise (PLU Tracking)
- Profit Centers
- Menu Items, Modifiers and Options
- Menu Set up
- Quick Menu Set up
- Price Level Set up
- Promotions
- Inventory Reporting – Basic
- Report Exporting – Multiple Formats
- Sales Volume Tracking
- Head Count and Table Turnover Tracking
- User Defined Reports
- Electronic Journal History
- Time and Attendance / Clock In Clock Out
- Section Navigating

- Table Management
- Reservation Management – Basic
- Customized Graphical Table Layout
- Menu Refresh
- Quick Bar / High Volume Bar Option
- Take Out
- Table View
- Check Splitting
- Tab Transfer
- Print Priority / Send Order
- Menu Item Count Down
- Server Transfer
- Multi-Lingual and Multi-Currencies

ADDITIONAL VOLANTÉ MODULES

- Customer Database
- Labor Scheduling
- Credit Card Authorization
- Advanced Inventory and Recipe Costing
- Liquor Inventory Control
- Wastage / Spillage Tracking
- Property Management

ADDITIONAL VOLANTÉ PACKAGES

Volanté Go Wireless™ Software

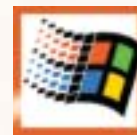

- Windows or Java OS

Volanté Express™ Quick Serve Software

- Kitchen Video
- Customer Display
- Cashier Mode
- Full Back Office Reporting

VOLANTÉ ENTERPRISE EDITION

- Corporate Head Office Data Management
- Enterprise Reporting
- Centralized VIP Program
- Management Reporting / Environmental Control
